Steps to run the project
 1. npm install
 2. npm run dev

Project will run on port 8080 and its configured in package.json.
You guys can use http://localhost:8080 to open in browser .

I have mostly worked on functionality and added few extra thing like
    1. Scroll to top – This button will be visible after adding certain tasks to the list.
    2. Auto scroll to newly added element after adding certain tasks to the list.
    3. Before deleting any element, get confirmation from the user.

Note – Not work on responsiveness.
